### Key

#### Estimated basic water level

- Area flooded between 3.0 and 5.0m
- Area flooded between 0.5 and 3.0m
- Area flooded below 0.5m
- Local authority regional border
- Evacuation target area

- Emergency evacuation location
- Evacuation target point
- Temporary tsunami evacuation location

\*You should evacuate in principle regardless of flood depth.  
(If there is no time to evacuate and it is dangerous to go outside, you should evacuate vertically)  
\*Please check the latest situation regarding open evacuation locations.

### ●Rough time required for evacuation (23m/min)

\*23m/minute: Specified based on assumption that an earthquake has occurred, and liquefaction has taken place.  
\*This will depend on the circumstances and your individual situation, so should be considered no more than an indication.
