

Handa City Hazard Map for Water-related Disasters

What you can do now to prevent loss of life in a water-related disaster

Take part in disaster prevention training

Handa City implements regular disaster prevention training and workshops in local communities, workplaces and schools, with the objective of ensuring that everyone is thoroughly aware of how to evacuate in case of a disaster, and how to use basic disaster prevention equipment. Your local community organization will inform you of these workshops, and they are also listed in the City's magazine and its disaster prevention Twitter feed. We ask that you proactively participate in activities taking place in your local area.
